Coincident Search

Overview

- **“Give me all the spatially coincident and time coincident within 24 hours MODIS sea ice extent data and ASTER level 1B data over the Ross Ice Shelf In Antarctica for March to June of 1999”**
- **Requires cross-site query**

Assumptions

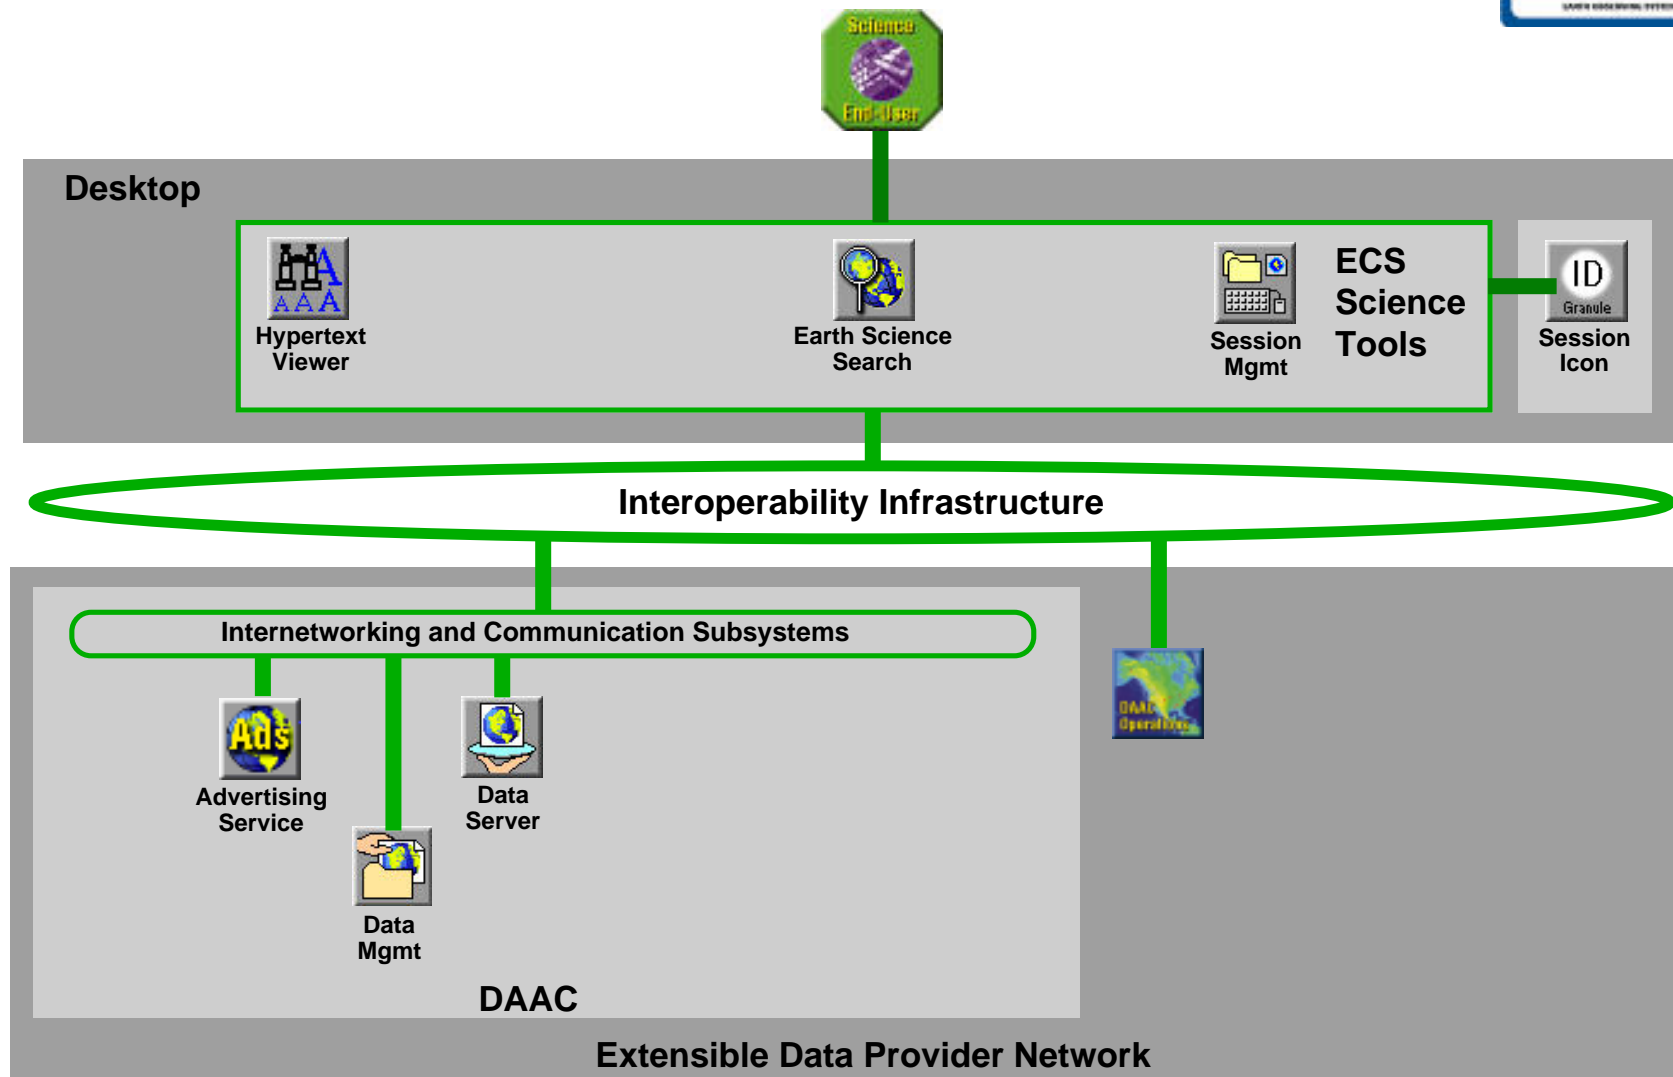

- **Requires only one Science Data Server at each site**
- **Science End User is authorized to execute the query**

Preconditions

- **Science End User has registered with system**
- **Science End User has installed ECS Client on local workstation**
- **Relevant MODIS and ASTER data have been stored on Science Data Server**

DIM receives SEARCH REQUEST from ESST

⑦ *DIM initiates processing of query - creates query plan.*

⑧ *DIM gets locations of requested data from Data Dictionary and uses them to determine routing of query.*

DIM sends QUERY for UR of Science Data Servers to ADVERTISING SERVER

⑨ *ADVERTISING SERVER retrieves URs of Science Data Servers*

ADVERTISING SERVER sends URs of Science Data Servers to DIM

Coincident Search

Points of View

- ⑩ *DIM addresses the Search Request Components using returned URs*

DIM sends QUERY
COMPONENT 1 to SCIENCE
DATA SERVER 1

DIM sends QUERY
COMPONENT 2 to SCIENCE
DATA SERVER 2

- ⑪ *SCIENCE DATA SERVER 1
queries inventory*

- ⑫ *SCIENCE DATA SERVER 2
queries inventory*

DIM monitors status of Science
Data Server queries, supplies
STATUS to ESST

- ⑬ *ESST displays STATUS*

- ⑭ *SCIENCE DATA SERVER 1
completes query, sends RESULT
SET 1 to DIM*

Science End User
views STATUS
